Introduction

CareWindows Process Control Master is an advanced process management utility that picks up where Task Manager leaves off. It will show you detailed information for any process. CareWindows Process Control Master provides information about programs and processes running on your computer. It also displays the most commonly used performance measures for these processes. Use Process Control Master to monitor key indicators of your computer's performance, see the status of the programs that are running or end programs that have stopped responding. You can also assess the activity of running processes and see graphs and data on CPU and memory usage.

CareWindows Process Control Master is an essential tool for dealing with threatening programs. It lists all the processes active on your computer, displays information on the process details and allows you to kill programs manually if necessary.

Features Overview

What the Process Control Master is and what you can do with it:

See what's happening behind the desktop.

See the modules of each running process. **Process Control Master** allows you close normally or terminate any running process.

See graphs and data on CPU and memory usage.

Complete information about processes and modules.

Show the general information of selected processes.

Specify process counter column headings.

Black List confirms items being analyzed are not acceptable.

White List confirms items being analyzed are acceptable.

Search for process information through Google.

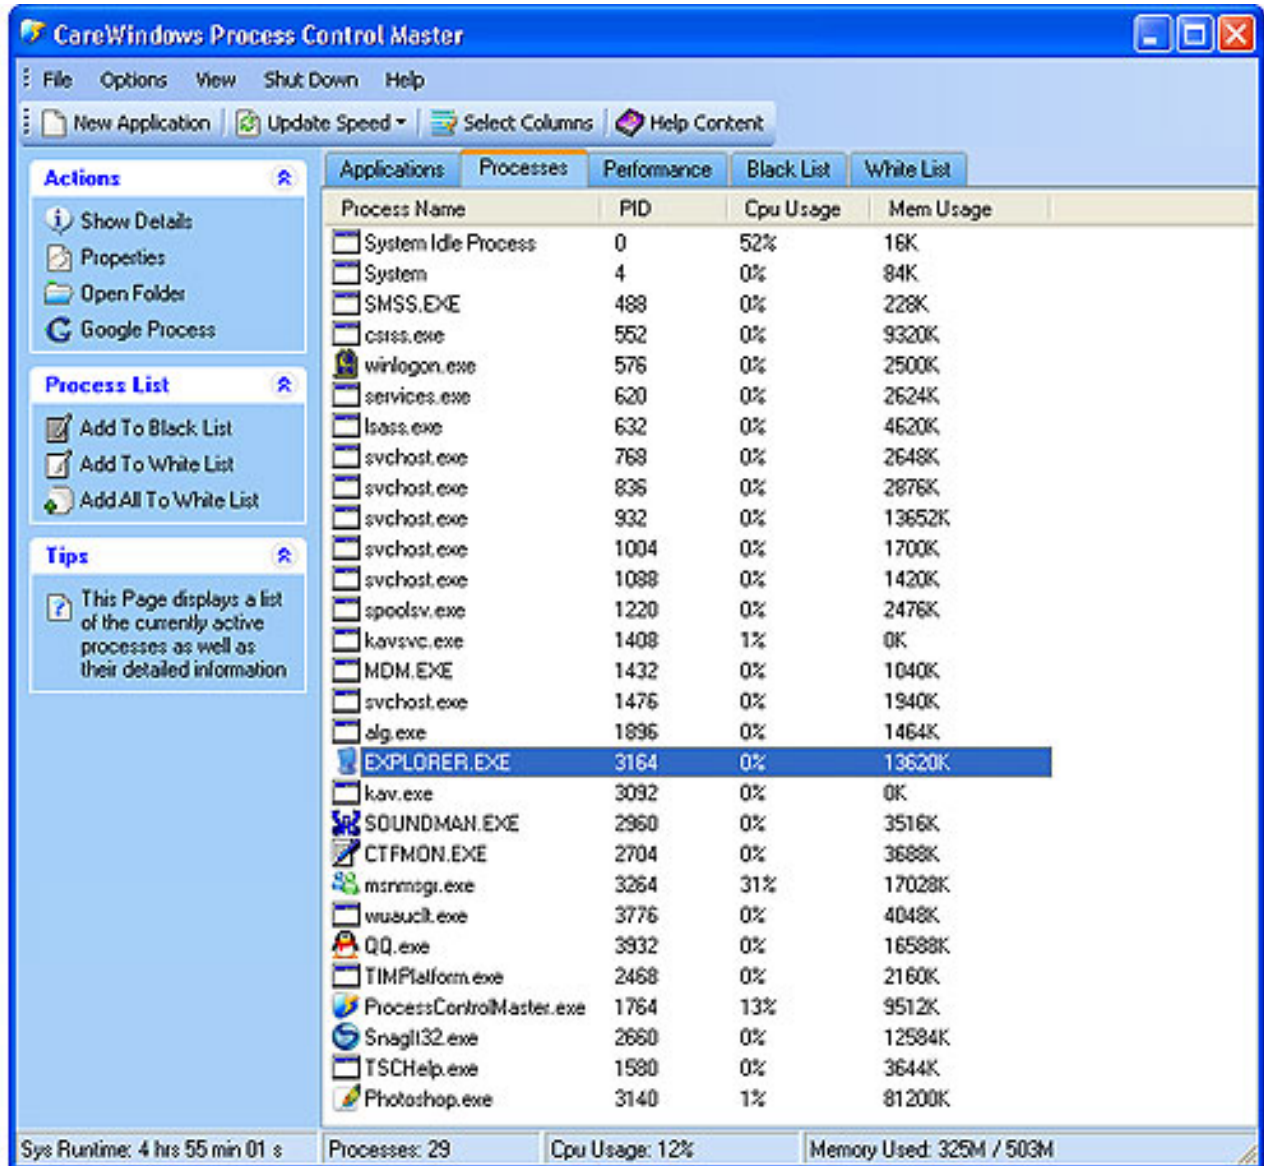

Pause process suspends the execution of process until it is reactivated by the resume process command.

With one quick look you can see that **Process Control Master** is the tool you've been looking for to show you the inner workings of your computer, manually control program processes and more.

CareWindows Process Control Master

The user interface (Overview)

The user interface (Overview)

Overview: When CareWindows Process Control Master is started, all currently running processes are displayed under the Processes tab.

Toolbar: Adding new applications, regulating update speed, select columns for processes and help content are all included to help users run these relevant commands conveniently.

Task Panel: Allows user to approve or deny some of the commonly used tasks.

Tab Page: Applications, Processes, Performance, Black List, and White List allow user to

navigate from one page to another.

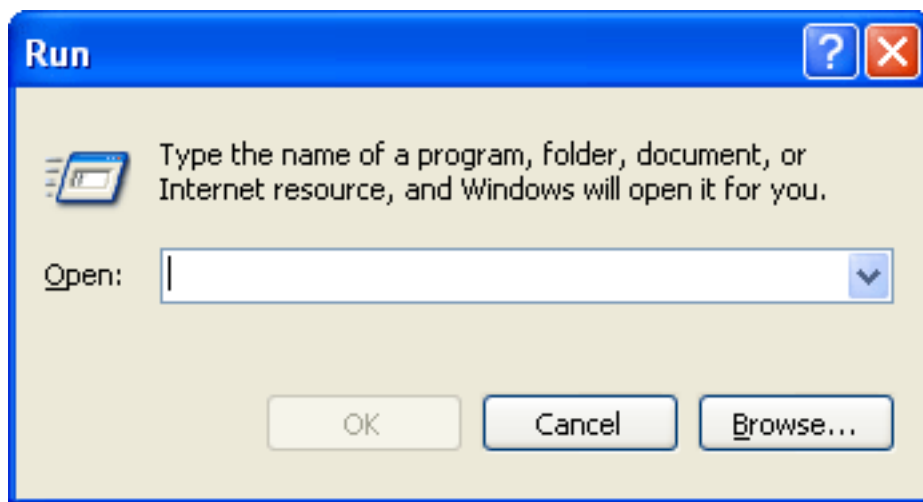

How to Add a new application

Add a new application by clicking 

The following steps describe how to add a new application:

- ▶ **Step1:** Click the "New Application" button to open the Windows Run dialog.
- ▶ **Step2:** Type the name of a program, folder, document or internet resource and windows will open it for you.

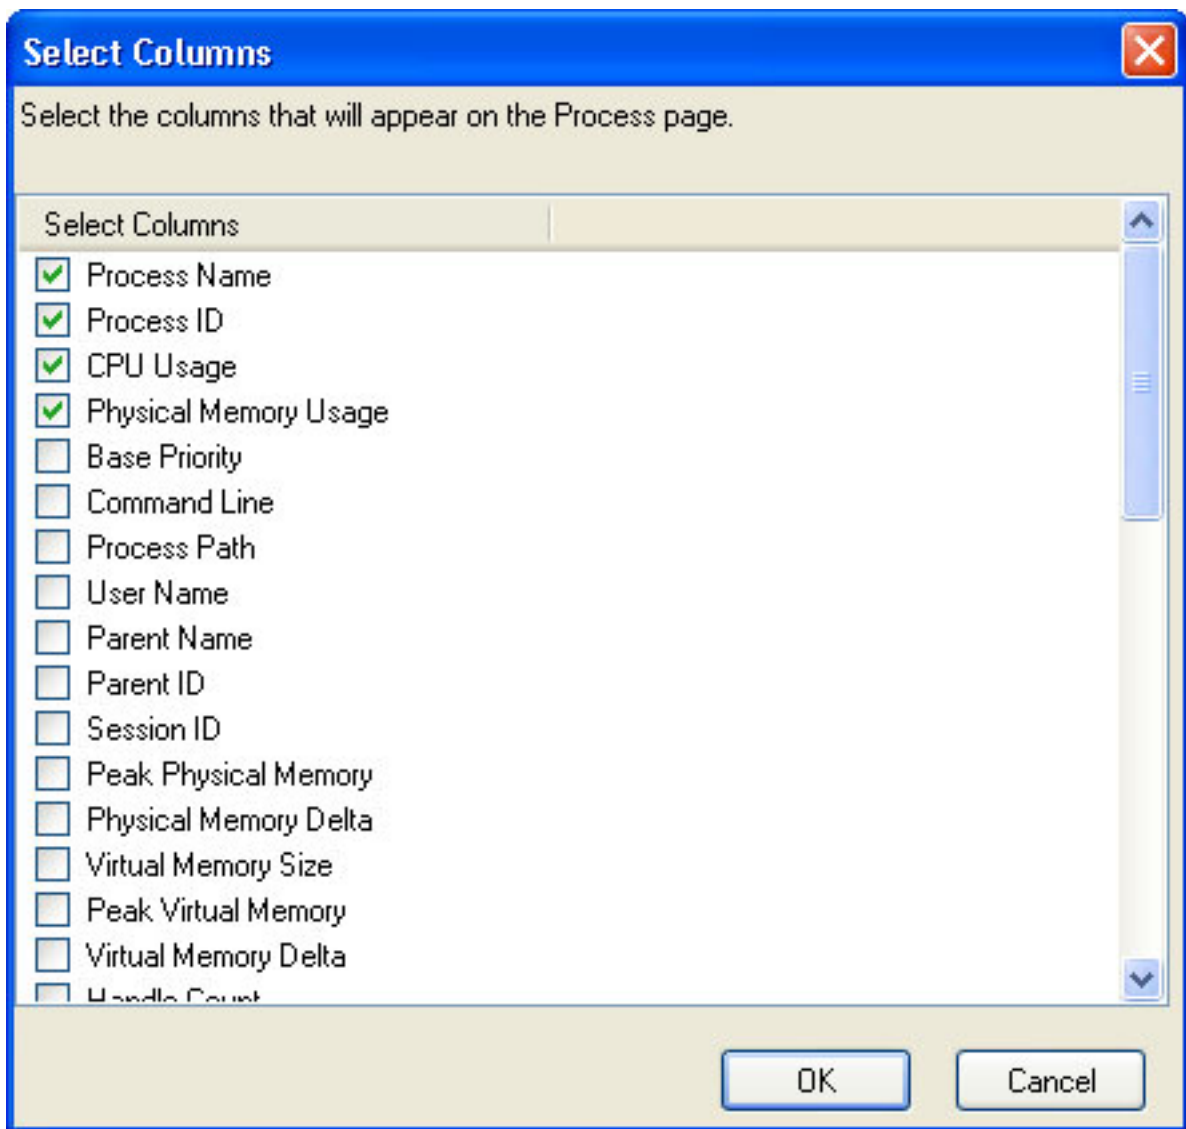

About Update Speed

This function allows you to select the frequency at which the data is automatically updated, Click  tab, then click the desired command. To temporarily freeze the data displayed in Process Control Master, Click "Paused" on the same page. Data is automatically updated every one second by default.

How to select columns

The following steps describe how to select columns:

- ▶ **Step1:**Click the "Process" tab.
- ▶ **Step2:**Cick the button  and the following dialog will appear:

Select the columns that you are about to add on the process page of the process manager, click OK to confirm or Cancel to cancel.

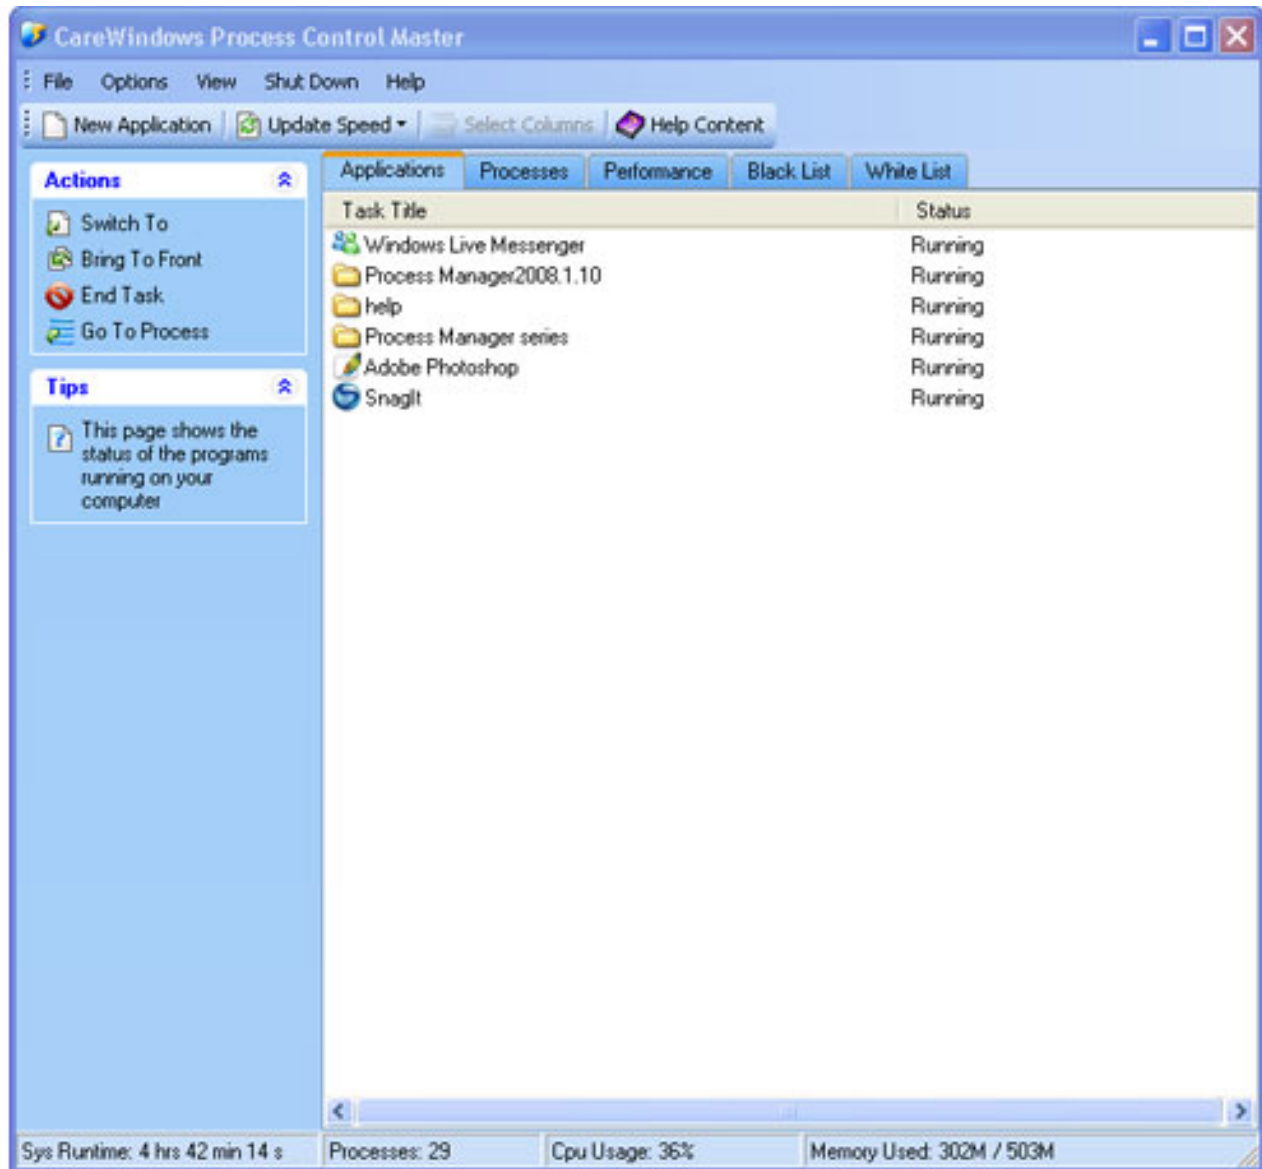

Other Using Process:

- ▶ [Using Process of Application](#)
- ▶ [Using Processes](#)
- ▶ [Using Process of Performance](#)
- ▶ [Using Process of Black List](#)
- ▶ [Using Process of White List](#)

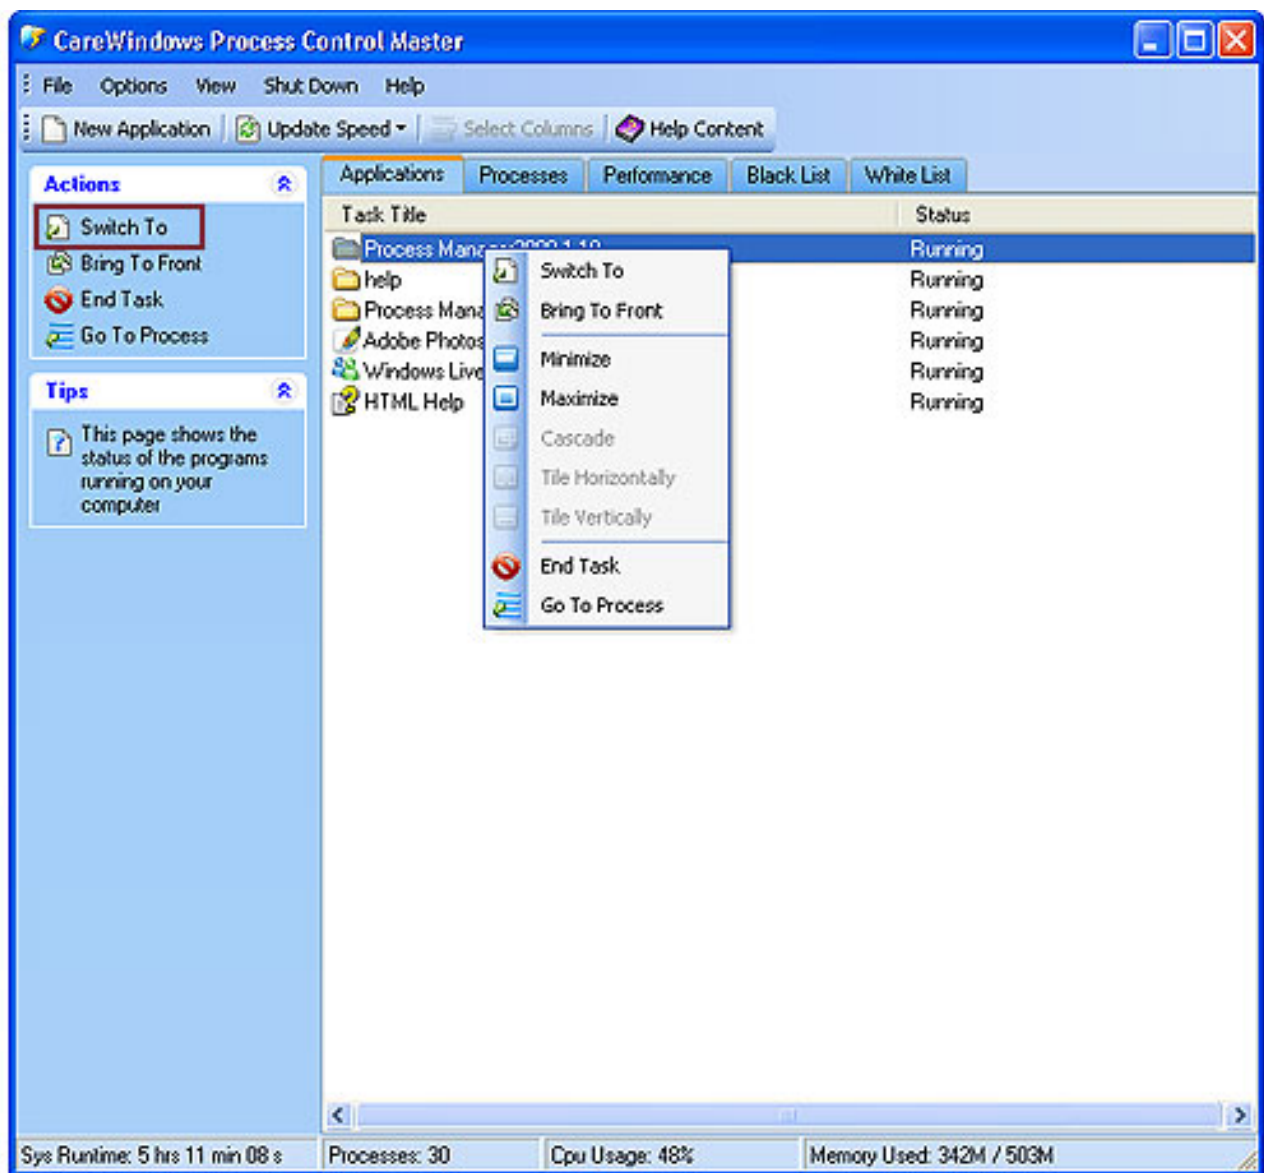

Buy Now

Using Process of Applications

► **Step 1:** CareWindows Process Control Master will display all active programs on the taskbar by clicking "Applications" Tab.

► **Step 2:** To perform a task with a running program, right click the program and select a desired action from the list or select the action from the task panel.

▶ To switch to another program, click the desired program and click "Switch To" in the task panel.

▶ To bring a program to front, click the desired program and click "Bring To Front" in the task panel.

▶ To control the program's window, right click the desired program and select "Minimize" or "Maximize".

▶ To end a program, click the desired program and click "End Task" in the task panel.

 **WARNING:** Any data entered or changes made without being saved in selected program will be lost.

▶ To go to the process interface, click the desired program and click "Go To Process" in the task panel.

Other Using Process:

▶ [Using Process of Toolbar](#)

▶ [Using Processes](#)

▶ [Using Process of Performance](#)

▶ [Using Process of Black List](#)

▶ [Using Process of White List](#)

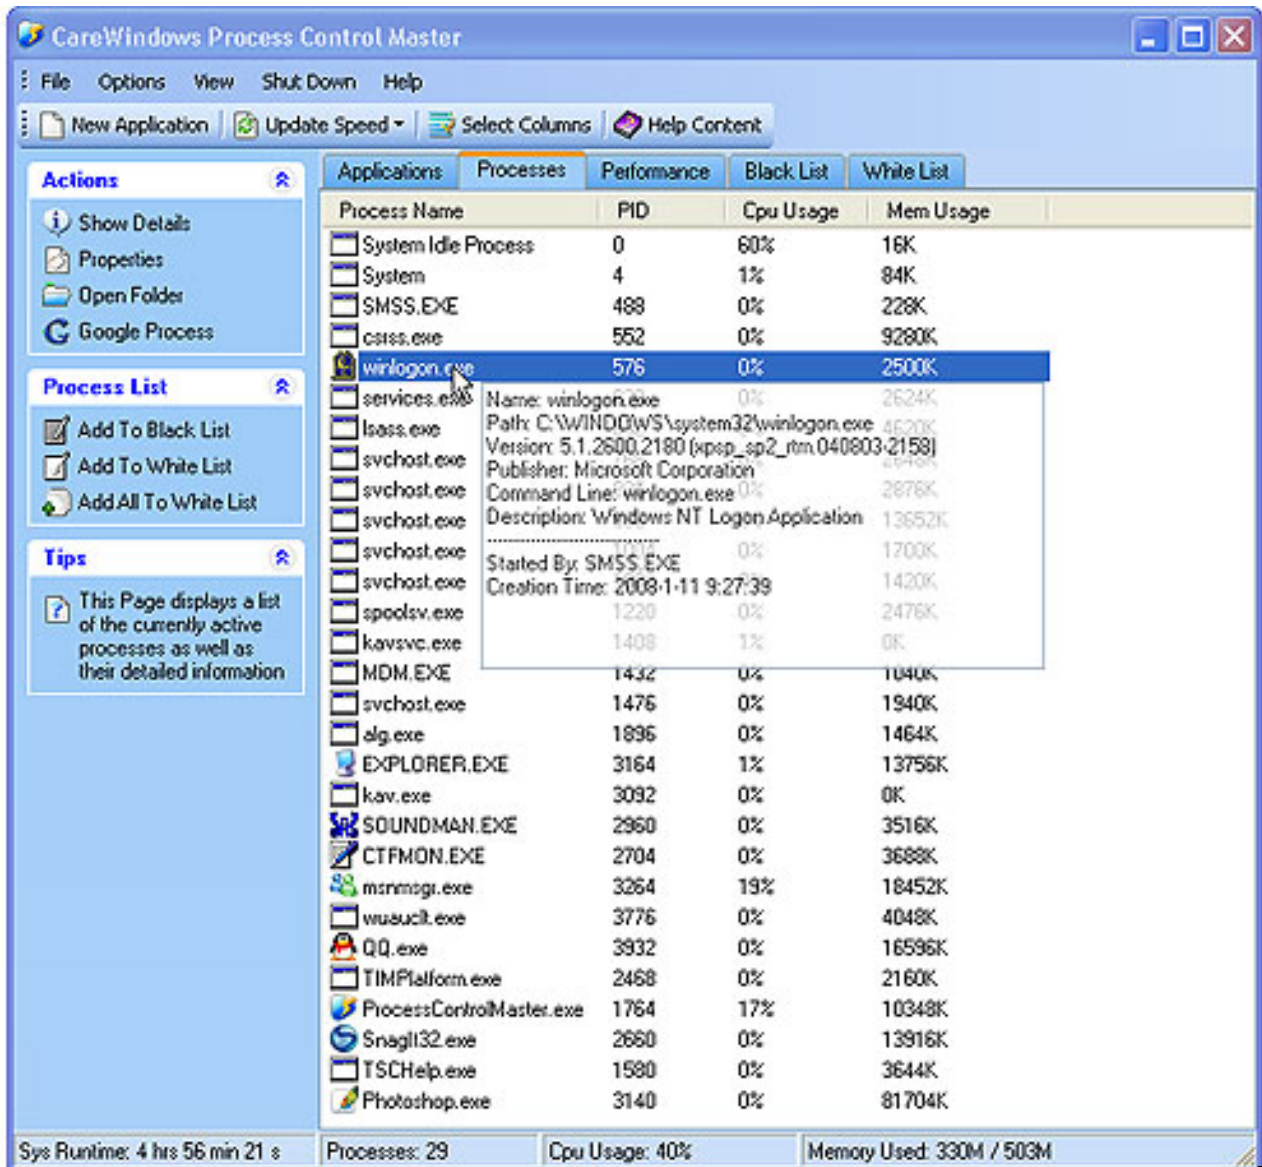

Using Processes

Process Control Master allows you to view detailed process information (with descriptions), stop and start new processes, set properties and much more. You can easily find and remove unnecessary background processes.

See which processes are running on your computer and what's really happening behind the desktop!

On the Processes interface, click a listed process to view the General information about the process. Click Show Tips under the View menu to hide the displayed information. The following steps will assist in viewing the detailed information of listed processes.

▶ Step 1

To end a process, right click the desired process to end and click "End Process".

WARNING: Terminating a process can cause undesired results including loss of data and system instability. The process will not be given the chance to save its state or data before it is terminated.

To end a process tree, right click the desired process process to end and click "End Process Tree"

WARNING: This operation will attempt to terminate this process and any processes which were directly or indirectly started by it. Forcing processes to terminate in this manner can cause data loss and system instability.

▶ Step 2

A. To debug the selected program by clicking "Debug".

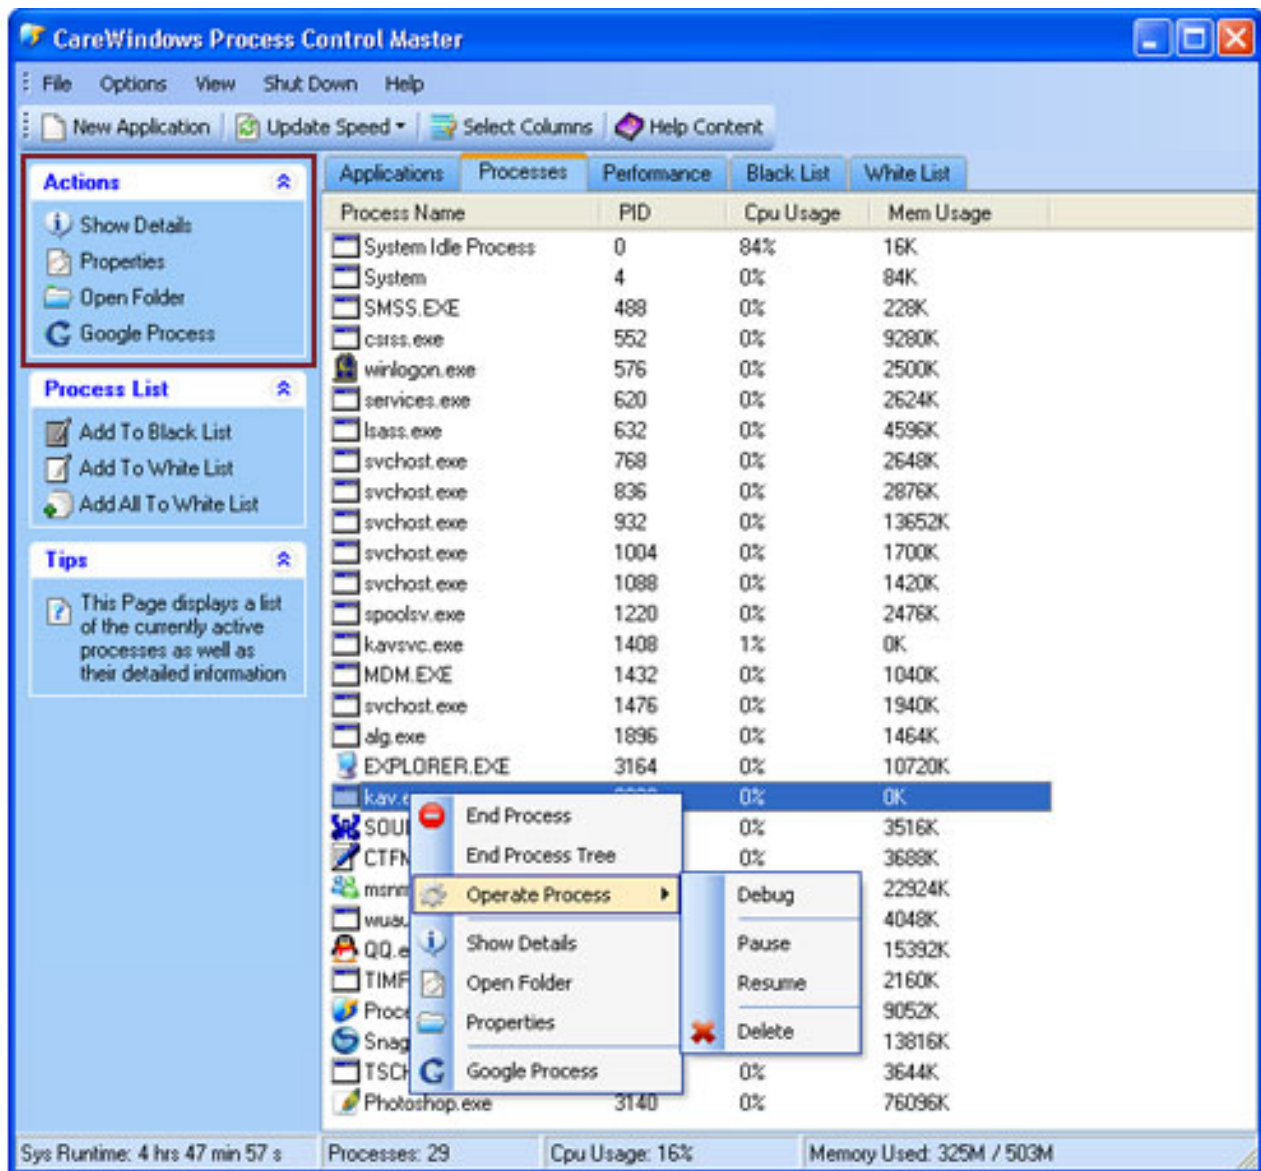

WARNING: This operation may result in loss of data.

B. Pause process suspends the execution of process until it is reactivated by the resume process command, click the "Pause" or "Resume".

WARNING: This operation will attempt to pause this process. Pausing a system process can cause system instability.

C. Resume the paused process by clicking "Resume".

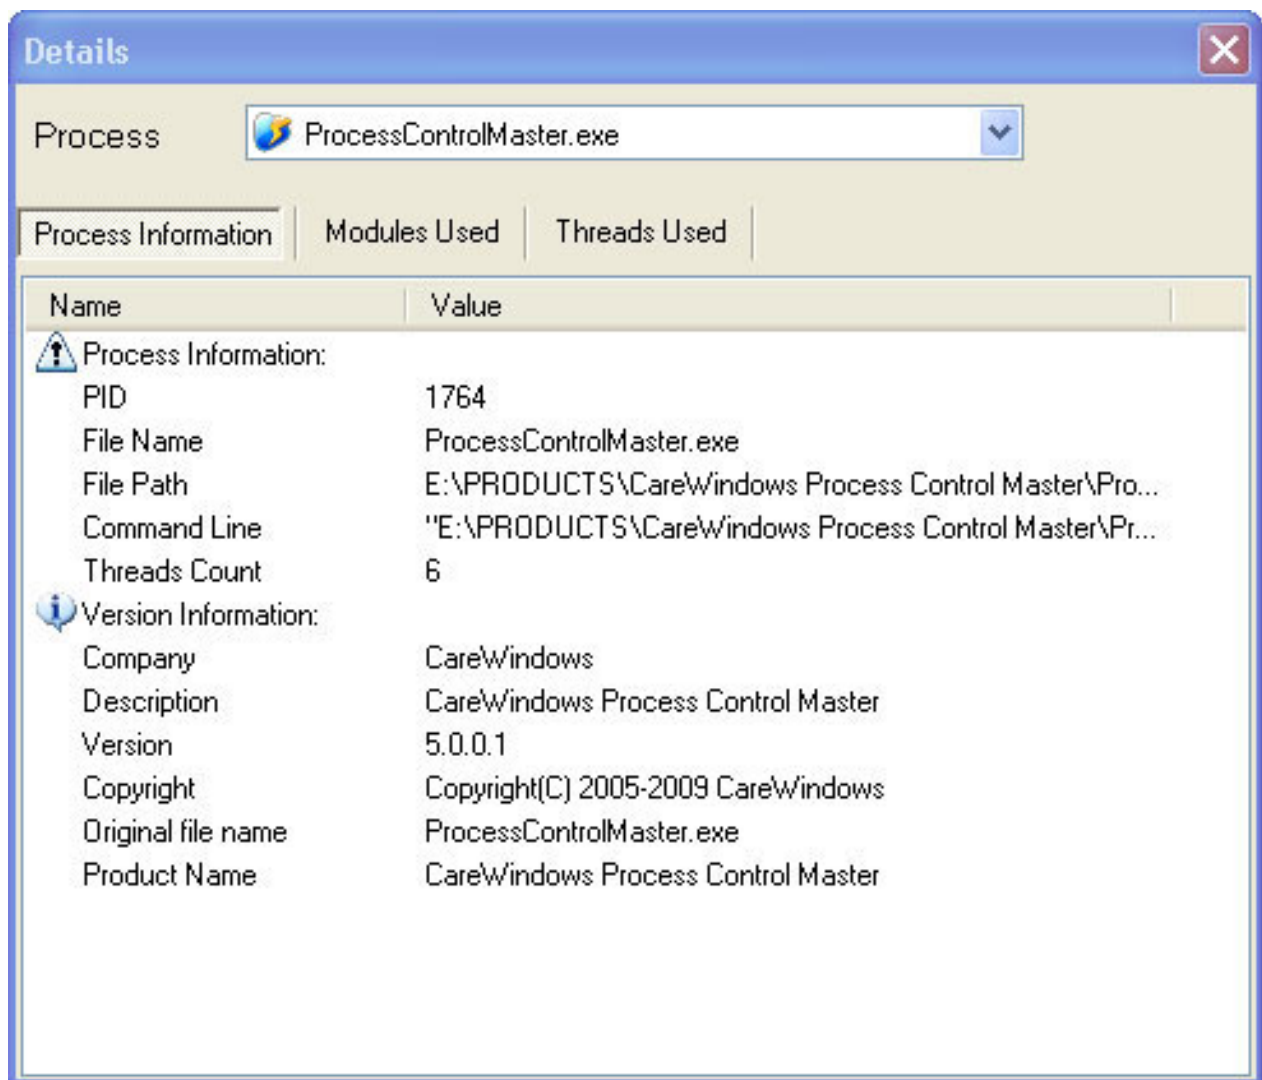

D. Delete the process by clicking "Delete".

WARNING: Deleting a process can cause undesired results including loss of data and system instability. It will delete the executed file of this process.

► **Step 3:**

Click " Show Details" to show information, used modules and used threads in a selected process. **(The same operation is available in the Action area.)**

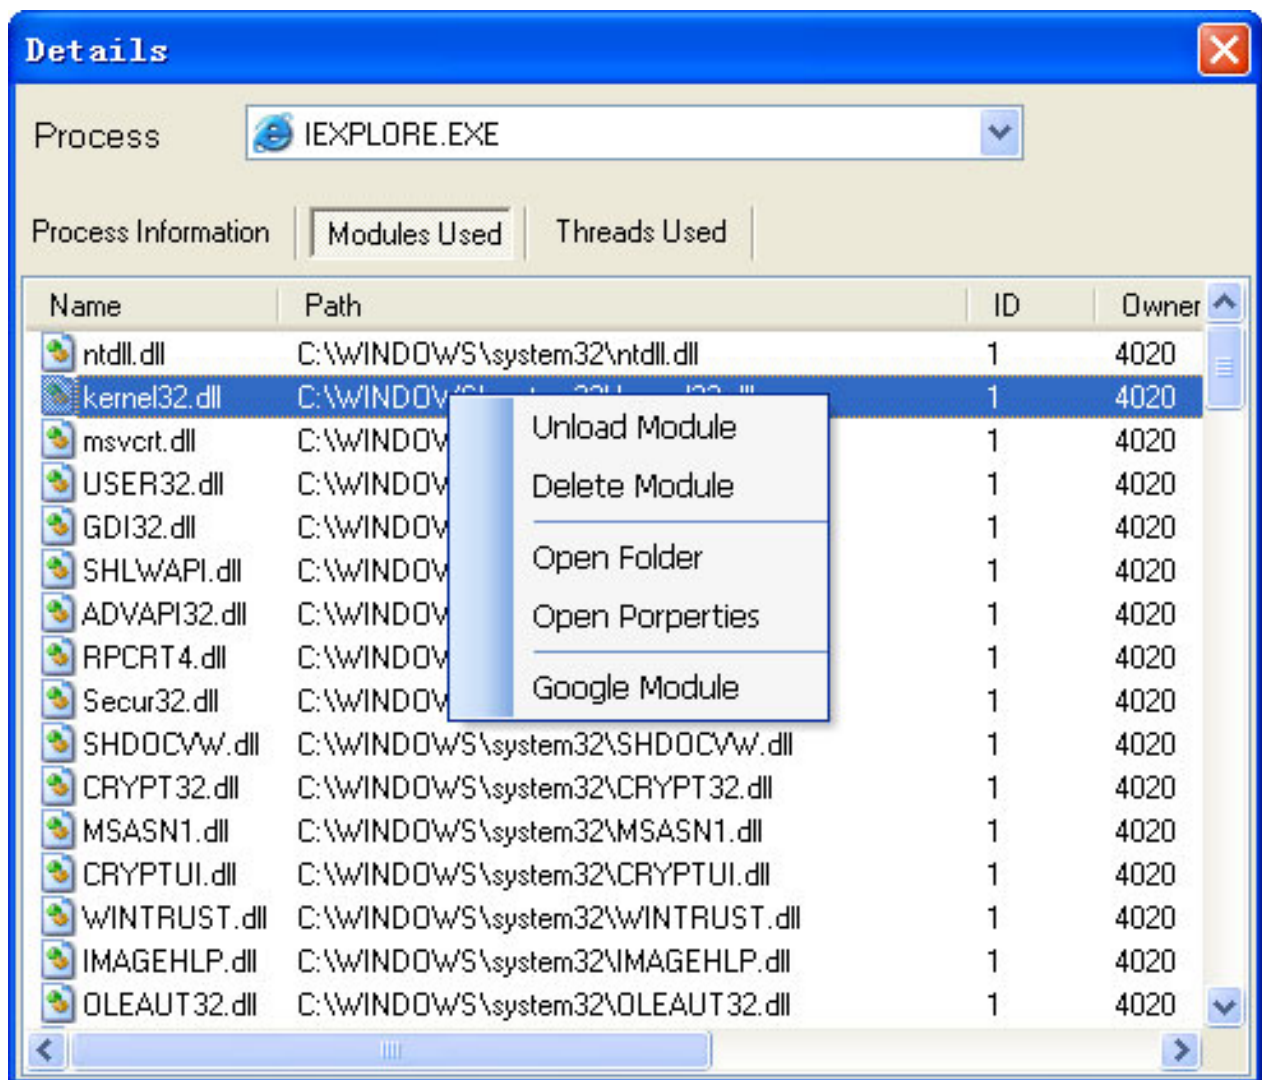

A: To unload modules of a process.

On the Modules Used tab, click the module that you want to unload, then right-click to Unload Module.

B: To delete modules of a process

On the Modules Used tab, click the module that you want to delete, and then right-click to Delete Module.

WARNING: The two operations may cause the process to crash. Unloading or deleting modules of some system processes can cause system instability.

C: To open properties of a process module

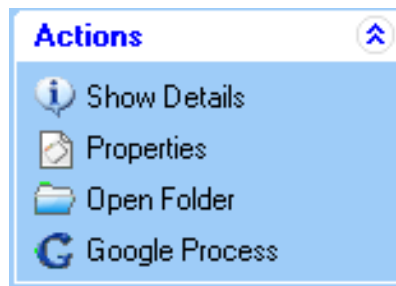

Click Open Properties, the properties of the selected module will be displayed.

D: To open folder for a process module

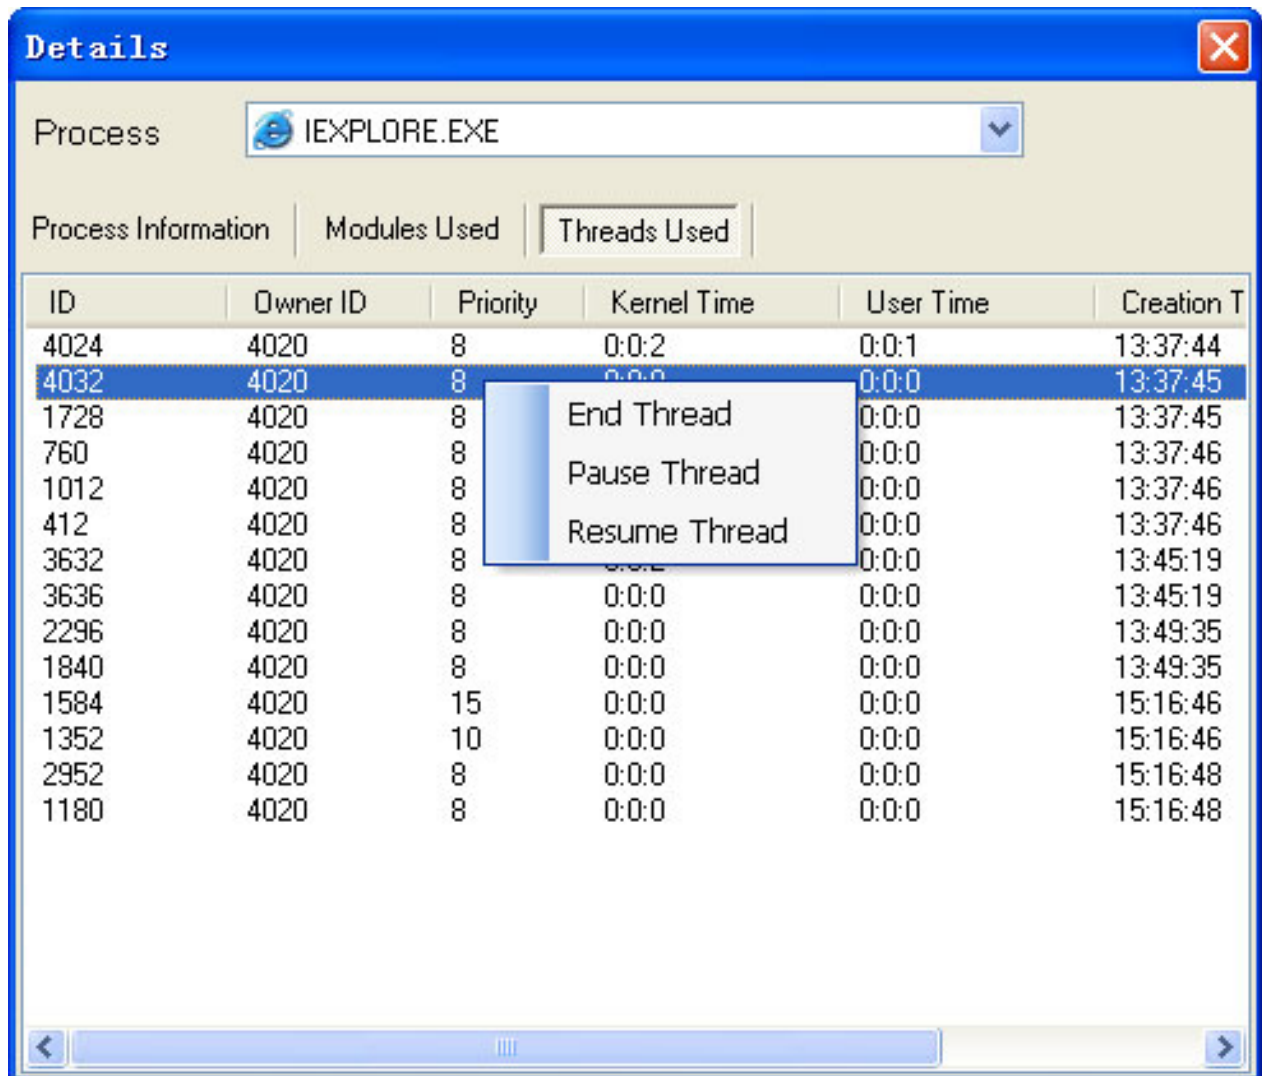

Select a module and right click "Open Folder" for detailed information.

E: Free online resources are available for module information through Google, by clicking "Google Process".

Note: You are able to search the online resource and open properties and folders for the selected process in the Action list.

► **Step 4:** End or Pause thread suspends the execution of a process until it is reactivated by the resume thread command shown below.

WARNING: The attempt to end the thread of this process may cause process break down and instability.

Other Using Process:

► [Using Process of Toolbar](#)

► [Using Process of Application](#)

▶ [Using Process of Performance](#)

▶ [Using Process of Black List](#)

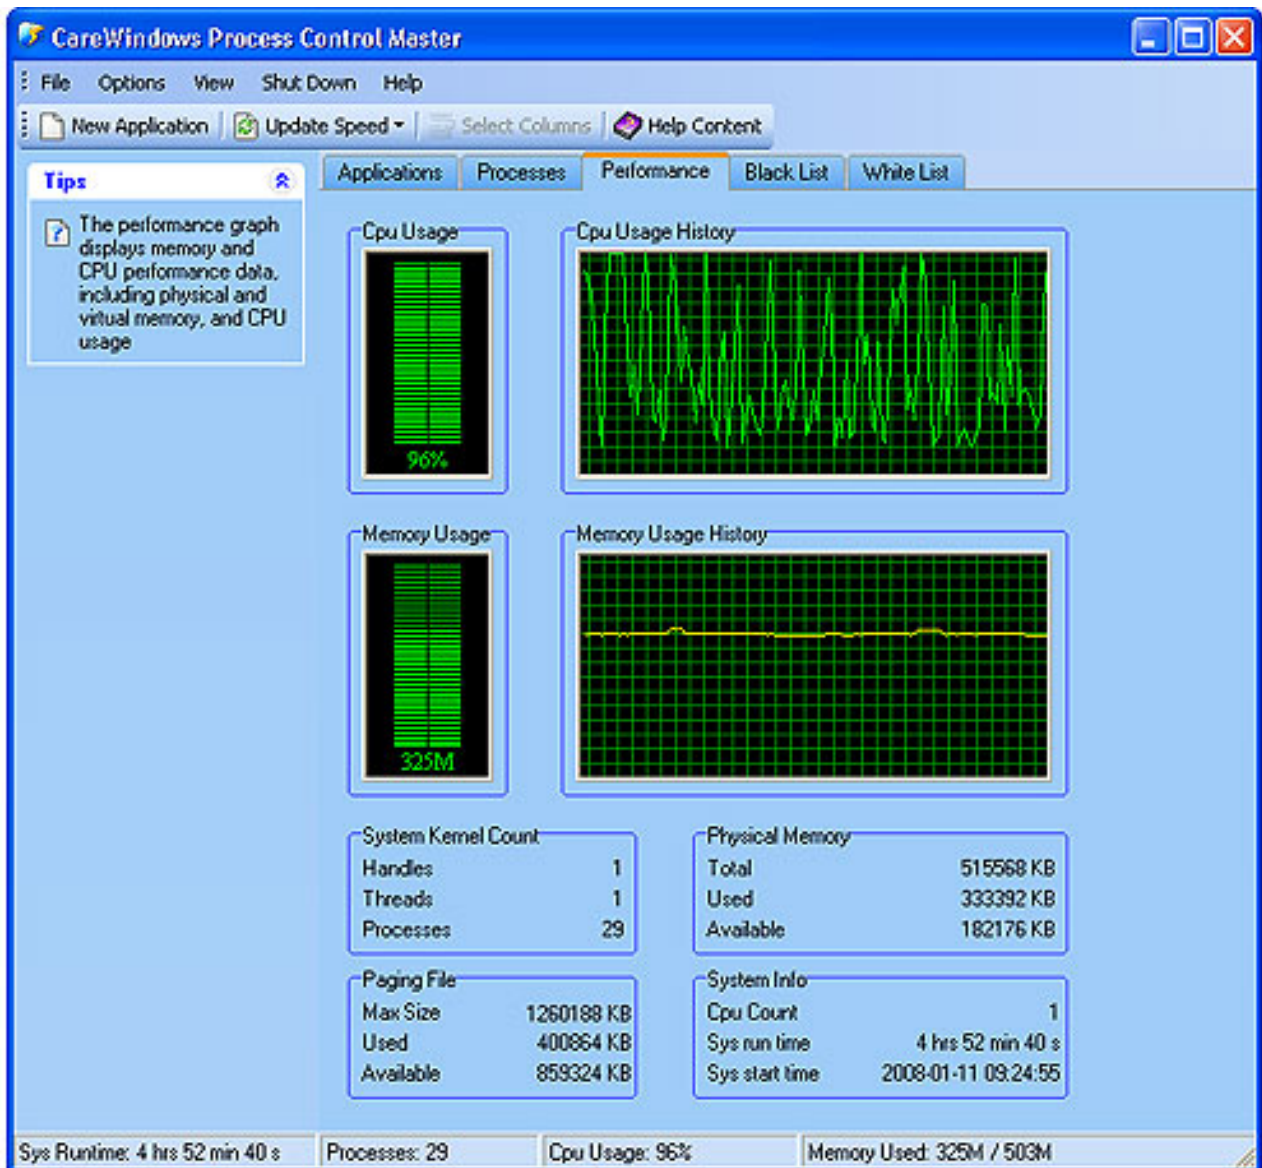

▶ [Using Process of White List](#)

Using Process of Performance

The Memory and CPU performance data is displayed on this page, including physical and virtual memory, and CPU usage. The data refreshes at the same interval that the main display does. The Performance tab provides detailed information on the current status of your system. View the current processor usage in percent and graphs of the processor usage for the last several seconds. A similar graph also shows memory usage for the last several seconds. Also view the current usage of the paging file and the physical memory on kilobytes.

► Click "Performance" Tab to view the performance graphs displaying memory and CPU performance data, including physical and virtual memory and CPU usage.

Other Using Process:

- ▶ [Using Process of Toolbar](#)
- ▶ [Using Process of Application](#)
- ▶ [Using Processes](#)
- ▶ [Using Process of Black List](#)
- ▶ [Using Process of White List](#)

Using Process of Black List

CareWindows Process Control Master offers the feature of "Black List" which is the list of processes that will be terminated in your system. Black List will terminate unwanted or threatening processes immediately when listed here. To terminate processes, add unwanted processes to Black List.

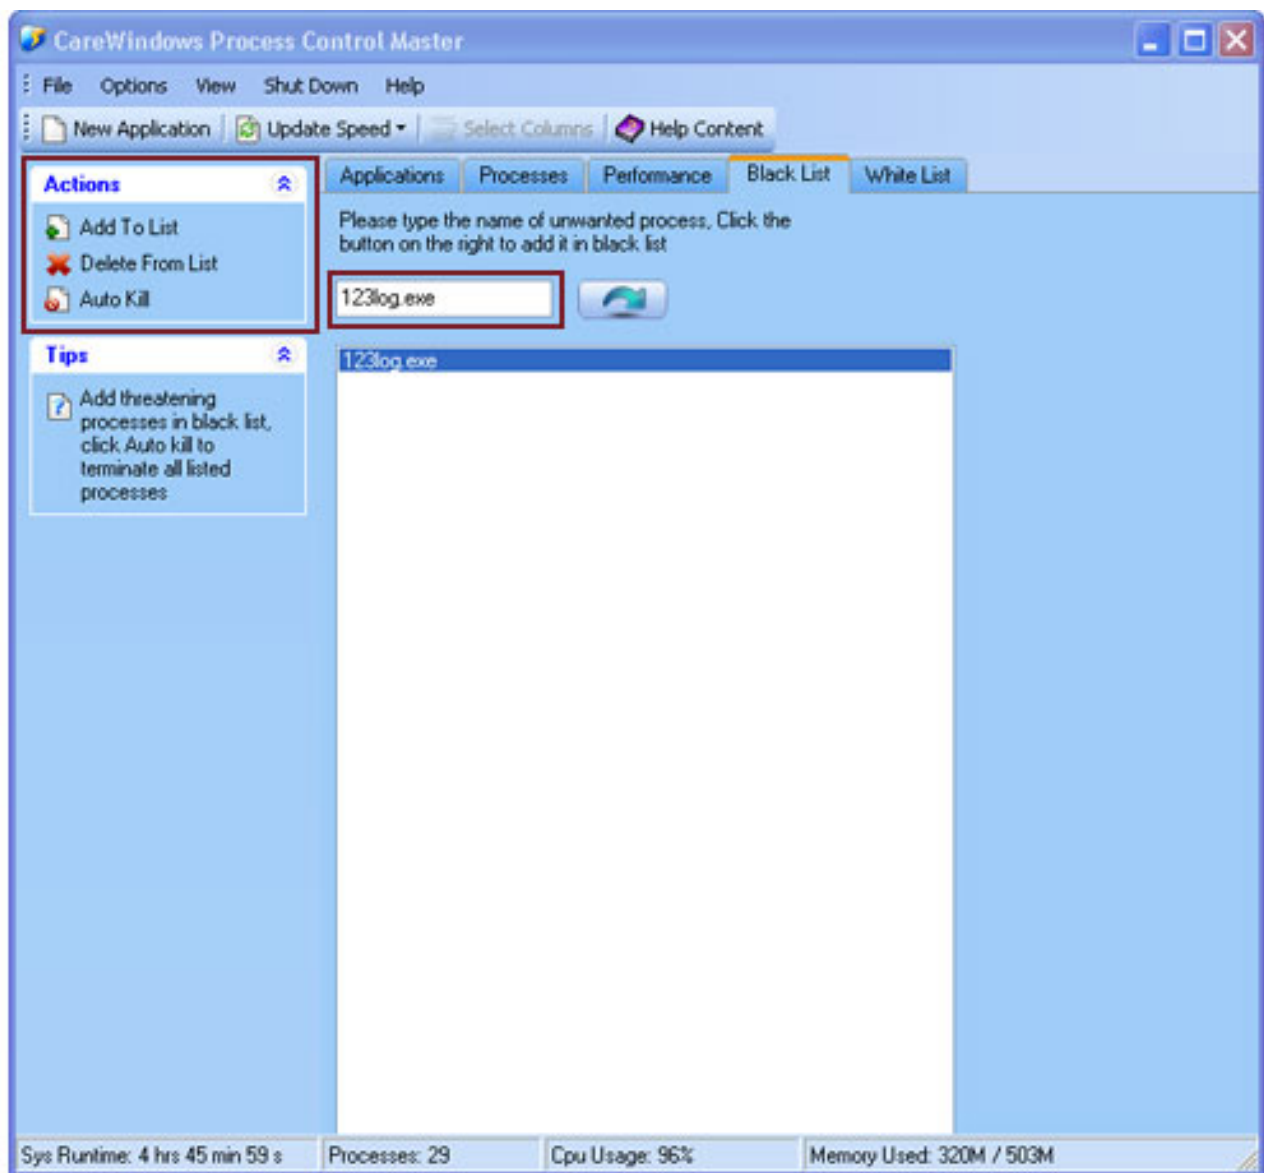

The following steps describe how to terminate processes on Black List.

▶ **Step 1:** Click the "Black List" Tab.

▶ **Step 2:** Type the name of the process and click  or "Add To List" in the task panel to add a process to the Black List.

▶ **Step 3:** Click "Delete From List" to delete the selected program from the Black List.

▶ **Step 4:** Click "Auto Kill" to terminate all processes listed in the Black List.

Warning: This operation will attempt to terminate all listed processes. The process will not be given the chance to save its status or data before it is terminated.

Other Using Process:

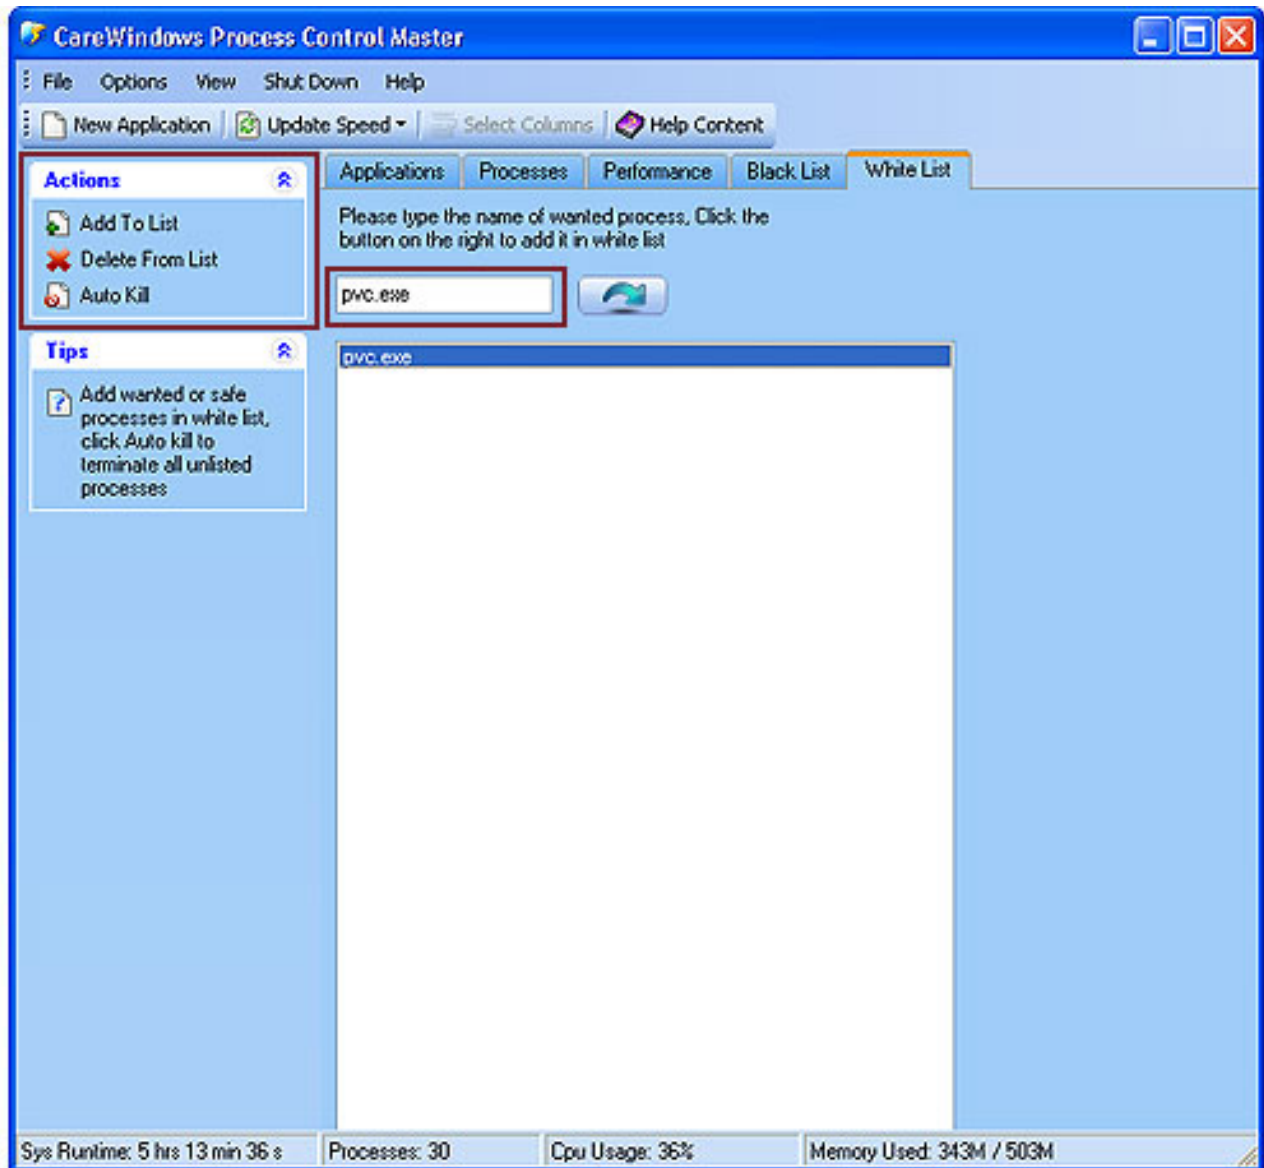

- ▶ [Using Process of Toolbar](#)
- ▶ [Using Process of Application](#)
- ▶ [Using Processes](#)
- ▶ [Using Process of Performance](#)
- ▶ [Using Process of White List](#)

Buy Now

Using Process of White List

White List confirms acceptable processes. It is a list of process names allowed to run on your computer.

Add all allowed or safe processes to White List. CareWindows Process Control Master will terminate all unlisted processes by clicking "Auto Kill".

▶ **step 1:** Type the process name you want to add ,then click  or "Add To List".

▶ **step 2:** To remove a process from the list, click "Delete From List".

▶ **step 3:**Click "Auto Kill" to terminate all unlisted processes.

Warning: This operation will attempt to terminate all unlisted processes. The unlisted process will not be given the chance to save status or data after you click "Auto kill".

Other Using Process:

▶ [Using Process of Toolbar](#)

▶ [Using Process of Application](#)

▶ [Using Processes](#)

▶ [Using Process of Performance](#)

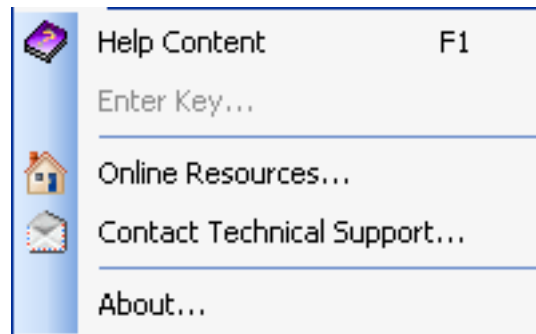

▶ [Using Process of Black List](#)

FAQs

➤ Replacing Task Manager

If you click File > Replace Task Manager, Carewindows Process Control Master integrates itself into your system so that you can access the module by pressing Ctrl +Alt+Del, or by right clicking on an empty part of the taskbar and selecting Task Manager. If you want to use the Windows Task Manager again, simply select the same menu item to remove the check mark in front of it.

Note: This function is only available for Windows 2000 and Windows XP.

➤ Menu bar functions

The menu bar at the top of the Process Control Master window provides you with additional functions.

Click File > New Application (Run...) to open the Windows Run dialog, which you can use to start a new application or open a file.

Click Option > Select Columns ,On this page you can specify which columns (information) you want to see in the list view of Process Info.

Click View > Always On Top, the process you choose always display on the most preceding.

Click Shut Down > Turn off, you can close your computer or restart it.

Click Help > Help content , show more help information in using of Process Control Master.

➤ To end a process

Click the process that you want to end, and then click End Process.

Be careful when ending a process. If you end an application, you will lose unsaved data. If you end a system service, some part of the system might not function properly.

➤ Process Properties

The "Process Properties" dialog displays additional information about a process.

The following info is shown:

A: Complete version resource

B: Path of the process executable

C: Current working directory

D: Environment variables

E: Resource types

F: Common file information
